## Calculating Percent \%

Converting Fraction, Decimal, and Percent

## From Fraction to Decimal to Percent:

To convert a fraction to a decimal, you must divide the numerator (top number) by the denominator (bottom number):
Ex.: $3 \quad 3 \div 4=\mathbf{0 . 7 5}$

Once you have the decimal equivalent, you can convert to \% by multiplying the decimal by 100 :

Ex.: $0.75 \times 100=75 \%$

## From Percent to Reduced Fraction:

To write the reduced fraction that the percent represents, first write that percent over a denominator of 100 :

$$
\text { Ex.: } 75 \%=\frac{\mathbf{7 5}}{\mathbf{1 0 0}}
$$

Once you have written the fraction, reduce it by dividing both numbers by their greatest common factor:

Ex.: Both numbers in the fraction can be divided by 25 .
$75 \div 25=3$, and $100 \div 25=4$ So the reduced fraction is $\frac{3}{4}$

## Calculating the Percent of a Number:

Method 1: Use the decimal equivalent, then multiply by the amount
Ex.: $30 \%$ of $200(30 \%$ is 30$)$
100
$30 \div 100=0.3$

Calculation: $0.3 \times 200=60$
*If this were a discount on the price of an item, you would then remove $\$ 60$ from the $\$ 200$ : $\quad 200-60=\$ 140$ (sale price)
*If this were a tax, you would add $\$ 200$ and $\$ 60$ :

$$
200+60=\$ 260 \text { (final price) }
$$

## Continued:

Method 2: Create a proportion and solve for the missing term Same example: 30\% of 200

$$
\text { Proportion: } \frac{30}{100}=\frac{\square}{200}
$$

You can use the scale factor or cross-product method to solve
Ex.: cross-product $30 \times 200 \div 100=\mathbf{6 0}$

## Determining 100\%:

Method 1: Create a proportion and solve for the missing term
Ex.: $40 \%$ of what amount is $=12$

Proportion: $\quad \frac{40}{100}=\frac{12}{\square}$

You can use the scale factor or cross-product method to solve

$$
\text { Ex.: cross-product } 12 \times 100 \div 40=\mathbf{3 0}
$$

## Continued:

Method 2: working backwards
Same example: $40 \%$ of what amount is $=12$
Calculation: $0.4 \times \square=12$

Working backwards: start with the answer, and do the inverse (divide)
$12 \div 0.4=30$
